Polarisation floor — Thai special-type sugar class (OCSB) Class floor only; natural and golden cane sugars are listed in OCSB's special-type sugar sheet. Producer specifications are far above it.	min. 60.00 °Z, or total sugars min. 70	Official specification
Origin	Thailand	

Natural brown sugar

Parameter	Limit	Basis
Colour — KSL natural brown sugar (website)	1,000–2,300 IU	Producer specification
Colour — KSL brown sugar (One Report 2025)	1,000–3,000 IU	Producer specification

Golden cane sugar

Parameter	Limit	Basis
Colour — golden cane sugar (Buriram Sugar One Report 2025)	> 800 IU	Producer specification
Polarisation — golden cane sugar (Buriram Sugar One Report 2025)	> 99.00 %	Producer specification
Moisture — golden cane sugar (Buriram Sugar One Report 2025)	< 0.2 %	Producer specification

Light natural sugar

Parameter	Limit	Basis
Colour — KTIS natural sugar (One Report 2025)	201–1,000 IU	Producer specification
Polarisation — KTIS natural sugar (One Report 2025)	99.00–99.50 %	Producer specification
Moisture — KTIS natural sugar (One Report 2025)	max. 0.20 %	Producer specification

Notes

Colour, pol and moisture differ by product line, so they are shown for each variant as producer specifications from the producers' own publications. The OCSB row is only the legal floor of the special-type sugar class. Codex soft brown sugar values are not used because they describe a moist, fine product. Each quotation states the specification of the offered lot.

Limits are shown with their basis: an official specification, exchange contract terms or a producer's published specification. Each lot's actual values are reported on its Certificate of Analysis, issued with every lot.

Packaging: 50 kg bags, 25 kg bags, Jumbo bags (FIBC), 1 kg consumer packs. The format for your order is confirmed in

the quotation.

To confirm the current specification for your order, request a quotation at anutida.com/request-quote/ or email sales@anutida.com.
