Invert Sugar Syrup

Liquid Sugar · Invert sugar syrup (hydrolysed sucrose syrup) · Origin: Thailand

As published at anutida.com/sugar/liquid-sugar/invert-sugar-syrup/ · updated 6 October 2026

Specification

Parameter	Limit	Basis
Product type	Invert sugar syrup (hydrolysed sucrose syrup)	
Invert sugar — EU 'invert sugar syrup' definition EU Directive 2001/111/EC — a reference, not a Thai requirement	> 50 % of dry matter	Official specification
Invert sugar — EU 'invert sugar solution' definition	> 3 % to 50 % of dry matter	Official specification
Dry matter — EU invert sugar solution / syrup	min. 62 % m/m	Official specification
Conductivity ash — EU invert sugar solution / syrup	max. 0.4 % of dry matter	Official specification
Fructose : glucose ratio — EU invert sugar solution	1.0 ± 0.1	Official specification
Brix — Thai producer concentrated cane syrup (Mitr Phol)	77 °Brix	Producer specification
Composition — Thai producer concentrated cane syrup (Mitr Phol)	50 % sucrose, 25 % glucose, 25 % fructose	Producer specification
Origin	Thailand	

Notes

EU rows are the legal definitions in Directive 2001/111/EC, used as a reference for specifying inversion level. The producer rows describe one Thai hydrolysed syrup, which is about half inverted. The inversion level, solids and colour of your supply are agreed in the contract.

Limits are shown with their basis: an official specification, exchange contract terms or a producer's published specification. Each lot's actual values are reported on its Certificate of Analysis, issued with every lot.

Packaging: Road tanker. The format for your order is confirmed in the quotation.

To confirm the current specification for your order, request a quotation at anutida.com/request-quote/ or email sales@anutida.com.
