Storage life — Thai producer retail pack (Mitr Phol)	3 years	Producer specification
Origin	Thailand	

Notes

Codex states that its loss-on-drying value does not apply to rock sugar. Producer rows describe one Thai retail product; the OCSB row is only the legal floor of the special-type class. Colour, pol, moisture and crystal size for your order are agreed in the contract and confirmed on the certificate of analysis.

Limits are shown with their basis: an official specification, exchange contract terms or a producer's published specification. Each lot's actual values are reported on its Certificate of Analysis, issued with every lot.

To confirm the current specification for your order, request a quotation at anutida.com/request-quote/ or email sales@anutida.com.
