Packing — ICE White Sugar contract	New PP bags with PE liner, min. 50 kg net	Exchange contract basis
Origin	Thailand	

Notes

Thai class limits come from the Cane and Sugar Board notification B.E. 2564 as reproduced in OCSB's control manual and set only pol and colour. ICE rows are the quality basis of the ICE Futures Europe White Sugar contract, not a guarantee for any lot. Codex rows are voluntary reference values from the 2001-amended text. The producer row is one Thai mill's published figure. Each quotation states the specification of the offered lot, confirmed by its certificate of analysis.

Limits are shown with their basis: an official specification, exchange contract terms or a producer's published specification. Each lot's actual values are reported on its Certificate of Analysis, issued with every lot.

Packaging: 50 kg bags, 25 kg bags, Jumbo bags (FIBC). The format for your order is confirmed in the quotation.

To confirm the current specification for your order, request a quotation at anutida.com/request-quote/ or email sales@anutida.com.
