Polarisation — VVHP (typical, Brazil)	? 99.6 %	Typical value
Origin	Thailand	

Notes

No Thai standard defines VHP: Thai VHP is raw sugar under the Cane and Sugar Board notification. The Brazilian row is a Platts price-assessment basis, the producer rows are individual Thai mills' published figures, and VVHP is a typical industry value. ANUTIDA quotes VHP against the pol, colour and moisture of the actual offer or your specification.

Limits are shown with their basis: an official specification, exchange contract terms or a producer's published specification. Each lot's actual values are reported on its Certificate of Analysis, issued with every lot.

Packaging: 50 kg bags, Bulk (vessel). The format for your order is confirmed in the quotation.

To confirm the current specification for your order, request a quotation at anutida.com/request-quote/ or email sales@anutida.com.
